

# The Miyawaki-Method

Ensuring successful tree growth for 100% even in dust cities !

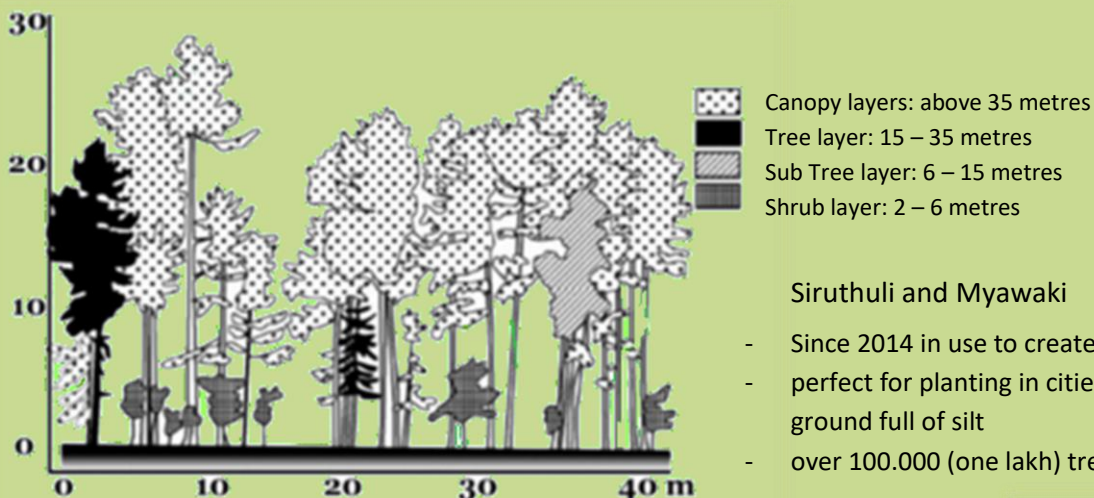

- Was founded 1990 by Japanese botanist Akira Miyawaki
- Ensures 100% tree growth under right execution
- Siruthuli uses Miyawaki Method successfully since 2014

“better air provided  
while  
less space needed”

## The Method

1. Choose **only the native tree** kinds that naturally would grow in the vegetation zone
2. Grow trees from native seeds in a **tree nursery**
3. Planting **small trees** with a strong root system
4. Plant in **high density** (4-6 saplings per square meter) to stir competition and phytosociological relations
5. Plant **different tree species** (10-30)

## Siruthuli and Myawaki

- Since 2014 in use to create *urban forests*
- perfect for planting in cities where the ground full of silt
- over 100.000 (one lakh) trees planted!
